

HP Workstations for Healthcare

Fast, reliable access to patient information

Insight⁺

intel.

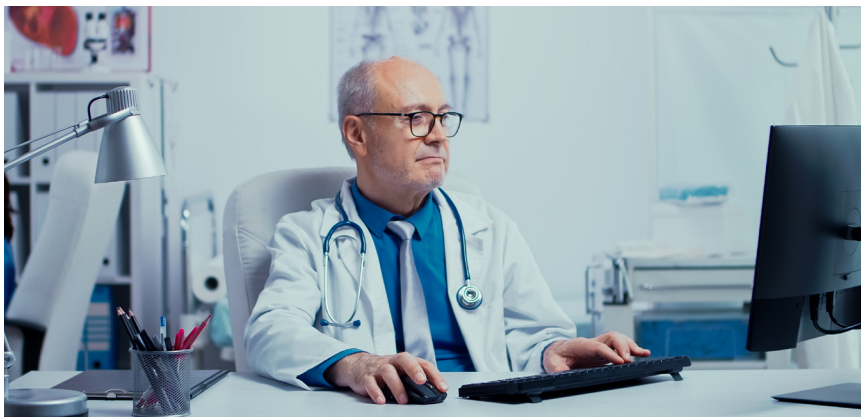

When it comes to point-of-care applications, time is everything.

Healthcare providers need fast, reliable access to patient information — whether from servers in the hospital, health system or the cloud. And in today's evolving threatscape, cybersecurity is a critical component of that access. While accelerated digital transformation has unlocked a multitude of benefits for modern care, it's also opened up new opportunities for cyberattacks.

48%

of U.S. hospital networks shut down at some point due to ransomware attacks in the first half of 2021 alone.¹

Luckily, HP® Workstations are up to the challenge.

24/7 access to the information you need

Available from Insight, HP Workstations deliver the reliability, performance and storage capabilities required for your healthcare environment.

Today's healthcare landscape demands a new level of access — from point of care to telemedicine, Electronic Medical Records (EMR) systems and Picture Archiving and Communication Systems (PACS).

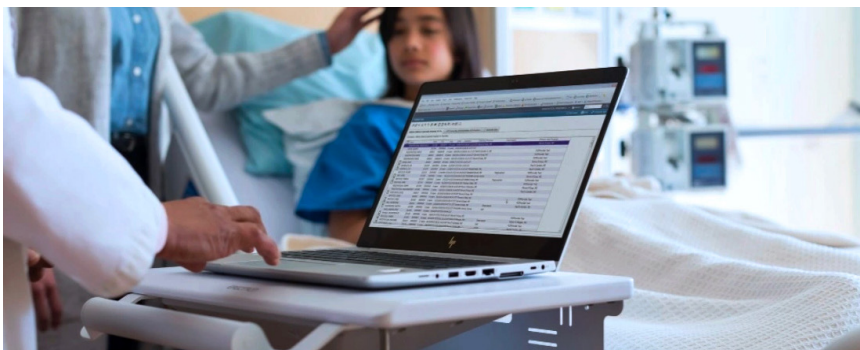

Modern tools should empower hybrid, connected teams to provide patient-first, personalized care. HP has developed solutions that reimagine healthcare technology, putting the needs of providers, clinicians and patients above all else and ensuring that medical records are readily available at the point of care.

Versatile and powerful

While there are many benefits to new and evolving healthcare tools, the growing number of systems, applications and data sources results in complex documentation processes. It's important that technology solutions make documentation simple, effective and user-friendly — and HP does just that.

With HP® Workstations, data can be stored locally for immediate access to patient workload and medical records. For example, workstations used at nurses' stations function as mini servers that house data for current caseloads and allow the seamless transfer of information between handhelds or tablet devices, replacing clipboard patient charts.

Once the patient case is complete, all associated information is uploaded back to the main Electronic Health Record (EHR) and EMR systems, where it remains secure and accessible for future needs.

Increase productivity and accuracy.

Optimized for your workspace, HP Workstations enable maximum performance while pushing the boundaries of innovation. And, they're designed to reduce overall acoustic output levels.

In both desktop and mobile systems, they provide efficient heat removal from processors and simplify servicing and upgrades. Long product lifecycles and simplified serviceability make them an ideal fit for healthcare.

Healthcare's digital evolution

Embracing innovation is a key component in successful patient outcomes. Telehealth is here to stay, and patients expect a new level of access to their medical information.

65%

Experts estimate that by 2023, 65% of patients will have accessed care through a digital front door.²

67%

In a 2021 survey, 67% of U.S. physicians stated that smart hospitals will need to use innovative technology to transform patient care and improve efficiencies.³

To meet these expectations, it's vital that healthcare providers can access patient information anywhere, anytime. HP creates a clear way forward for collaboration and accessibility, all while keeping patient data secure.

A team of experts on your side

The right tools strengthen collaboration, communication and efficiency across your healthcare organization. And, the right experts can guide the way.

With Insight, you'll get the confidence to tackle any IT challenge, including compliance and security, telehealth, data privacy, patient experience and more. We'll help find your ideal HP® Workstation to ensure optimal patient outcomes.

Do more with
powerful
technology,
confident
providers and
connected care.
